Attachments: SSD Selector Release Plan - August 7.xlsx

Importance: High

Hi Prashant,

Good job in uncovering the bugs in short time frame. I have attached latest spreadsheet. Please do your status updates on top of this version.

Features tab and "Test Plan Execution" tabs have been finalized. Moving forward, update those tabs as well with the appropriate data & status.

Few things required from you,

- For defects, always sort the items by Critical in the top followed by High followed by Medium followed by Low. Within each severity level, sub sort further with open items first followed by closed items. Refer attached.
- From Monday onwards, I need your QA status on "Test Plan Execution" tab – just fill columns D to L (don't touch first three columns where features are frozen for the current release)

From Monday onwards, I need detailed reports in both excel and ppt format. Refer full detail on my email with title "Status reports from next week".

Hi Balamani,

Current quality does not look good with 20 open Critical/High defects. Can you please close these ASAP by Monday 8/10 EOD and confirm?

Also when you provide bits to Prashant with fixes, move the status from "Open" to "Fixed". "Fixed" would imply that you have provided the fix to Prashant but he not verified it. Upon verification Prashant will move the status from "Fixed" to "Closed".

Thanks,
Gomes

Subject: Bug Fix Release Testing Report

Hi Balamani,
Greetings,

I have done the testing on the bug fix release in the Stage Environment , Status has been updated in the Defects tab, please find attached file.

With Regards,
Prashant.K
